

BRANDON ANTHONY BOYD

ENGINEER • ADMINISTRATOR • DEVELOPER

PROFESSIONAL EXPERIENCE

System Engineer III

GoDaddy • February 2025 – Present • Remote

Independent Problem Solving & Execution

- ▶ Consistently solving complex problems and delivering solutions independently, often serving as a go-to resource for peers facing similar challenges.
- ▶ Operating with a high degree of autonomy, requiring minimal direction on day-to-day work and proactively scoping new assignments.

Documentation Excellence

- ▶ Maintaining a strong track record of high-quality ticket documentation, upholding high team standards.
- ▶ Authoring comprehensive documentation across multiple products and platforms, including operational SOPs, developer notes, and Atlassian knowledge base articles.

Emerging Leadership

- ▶ Regularly leading standups, team meetings, and cross-functional discussions.
- ▶ Recognized as an emerging leader driving alignment, accountability, and team-wide operational readiness.

Continuous Improvement & Innovation

- ▶ Championing continuous improvement initiatives, identifying and implementing process enhancements, tooling upgrades, and automation that increased team efficiency.
- ▶ Taking calculated risks and experimenting with new approaches, with a proven history of turning experiments into adopted solutions.

Multi-Technology Investigations

- ▶ Investigating and resolving issues of moderate-to-high scope across multiple technologies—including application infrastructure, networking, databases, and security.
- ▶ Often connecting dots across systems that others miss.

Customer-First Mindset

- ▶ Proactively identifying gaps and problems within area of ownership and driving them to resolution without waiting for escalation.
- ▶ Leading complex, customer-impacting investigations end-to-end, coordinating across teams and delivering root cause analysis with actionable follow-ups.

Operational Readiness & Training

- ▶ Independently driving operational readiness across the team, including maintaining up-to-date documentation, developing training materials, onboarding new team members, and writing SOPs to standardize processes.

Subject Matter Expertise

- ▶ Established SME in Incident Management Process and one or more System Operations products/services, regularly consulted by peers and leadership for guidance.
- ▶ Deep experience coordinating and improving incident response workflows over multiple cycles.

System Engineer II

GoDaddy • July 2021 – February 2025 • *Remote*

- ▶ Developed Remediation Scripting For Troubleshooting Server Environment
- ▶ Utilized CMDB (Configuration Management Database) with ServiceNow
- ▶ Incident Management & Alert Monitoring On 100K+ Server Network
- ▶ Subject Matter Expert On WordPress Server Configuration & Remediation
- ▶ Monitored Network For DDoS Attacks Against Different Environments
- ▶ Engaged with Kentik Software To Track Trends In Network Traffic
- ▶ Mitigated Attacks Against Servers (Network Level Blocking, Network Swings, NetScout, iptables)
- ▶ Identify Trending Incidents, Perform Root Cause Analysis & Implement Process Changes To Reduce/Eliminate Recurrence
- ▶ Apache & IIS Troubleshooting
- ▶ Setup/Configure Services In WHM/cPanel & Plesk/Remote Desktop
- ▶ MySQL/MSSQL Database Troubleshooting
- ▶ Conducted Website & Content Migrations
- ▶ DNS & Email Configuration Setup
- ▶ Assisted Legal Team In Making Data Archives
- ▶ Utilized Confluence & Jira For Document Tracking & Versioning
- ▶ Completed Training To Keep Up With Best Security Principles & Practices

System Engineer I

GoDaddy • November 2018 – July 2021 • *Remote*

- ▶ Incident Management & Alert Monitoring On 100K+ Server Network
- ▶ Identify Trending Incidents, Perform Root Cause Analysis & Implement Process Changes To Reduce & Eliminate Recurrence
- ▶ Utilize Splunk Software & Command-Line To Review Relayed Email
- ▶ Coordinated With Tier 2 Agents To Assist In Providing First Contact Resolution
- ▶ Apache & IIS Troubleshooting
- ▶ Managed & Issued Network Violations For Users Abusing Network & Hardware Services
- ▶ Website & Server Restorations
- ▶ MySQL/MSSQL Database Troubleshooting
- ▶ Assist Office of the CEO & Management with Escalated Matters In The Environment
- ▶ Website Security Review/Configuration/Analysis
- ▶ Properly Identify and Remove Malware From Compromised Websites
- ▶ Coordinated with Tier 2 Level Teams On How To Correct Issues with New Tools
- ▶ Used Documented Issues To Have Developers Create Tools To Fix Common Issues
- ▶ Created Technical Documentation for Tier 1 & 2 For Best Practices When Configuring Services
- ▶ Setup of A HelpBot (LiveEngage), Automated Bot That Provides Answers To Agents Based On Common Issues In The Environment

Hosting Technical Lead

GoDaddy • February 2016 – November 2018 • *Scottsdale, Arizona | Remote*

- ▶ Worked Server/Managed Services Incident Queue
- ▶ Website Security Reviews/Configuration/Analysis
- ▶ Utilized Splunk To Review Email Server Relays, As Well As Incoming And Outgoing Emails On The Network
- ▶ Updated On External Facing Articles
- ▶ Beta Tested Cloud Servers
- ▶ Reviewed Active Issues With Internal Agents
- ▶ Created Internal Documentation In Relation To Troubleshooting Existing Support Issues
- ▶ Tracked Trending Issues Affecting The Network Over Extended Periods
- ▶ Completed Network Violation Reviews
- ▶ Migrated WordPress Website Content (WordPress/Joomla/Personal Sites)
- ▶ Completed Shared Hosting/Server Restores

Subject Matter Expert | Website Security

GoDaddy | Sucuri • August 2015 – November 2018 • *Scottsdale, Arizona*

- ▶ Determined Cost-saving Strategies By Publicizing Internal & New Documentation
- ▶ Subject Matter Expert (Website Security | Sucuri)
- ▶ Utilized Confluence/Jira For Document Tracking And Versioning
- ▶ Implemented Proper Security Principles And Practices
- ▶ Website Security Review/Configuration/Analysis
- ▶ Properly Identify And Remove Malware From Compromised Websites
- ▶ Implemented Fixes On Mis-configured Security Plans via API
- ▶ Used Documented Issues To Have Developers Create Tools To Fix Common Issues
- ▶ Coordinated With Tier 2 Level Teams On How To Correct Issues With New Tools
- ▶ Created Technical Documentation For Tier 1 & 2 For Best Practices When Configuring Services

Advanced Hosting IV

GoDaddy • November 2013 – January 2016 • *Scottsdale, Arizona*

- ▶ Tested cPanel And Plesk Releases For Shared Hosting Environment
- ▶ Created Supporting Documentation/Help Articles For Customers/Agents
- ▶ Provided Hosting Support For Front Of Site Chat Representatives
- ▶ Reviewed And Corresponded To Network Violations In Relation To Customer Hosting Plans
- ▶ Incident Management via Internal Ticketing System

Hosting Online Support Team

GoDaddy • February 2008 – October 2013 • *Scottsdale, Arizona*

- ▶ Instrumental In The Creation Of A Team Dedicated To Hosting Support
- ▶ Piloted The Server Support Chat Team
- ▶ Identified & Helped Resolve Issues In Relation To Customer Shared & Server Platforms
- ▶ Reviewed Incidents From Customers via Email
- ▶ Troubleshoot Email Configuration (MX Records/Mail Client Configuration)
- ▶ Identified Trending Issues Within The Network

AI & AUTOMATION

AI-Assisted Development

- ▶ Utilizing Claude Code for autonomous codebase work — multi-file refactoring, documentation generation, test creation, and architecture planning across full-stack projects.

- ▶ Applying prompt engineering techniques — system prompts, few-shot examples, token budget management, and temperature tuning — to produce reliable, repeatable AI outputs.
- ▶ Selecting models based on task complexity and cost profile, routing routine tasks to efficient models and complex reasoning to more capable ones.

AI API Integration

- ▶ Integrating the Anthropic SDK (Claude) and OpenAI API into Python and Node.js applications — streaming responses, tool use / function calling, and multi-turn conversation management.
- ▶ Building middleware that routes requests to different AI models based on task type and complexity, balancing quality against token cost at scale.
- ▶ Handling real-time streaming in chat interfaces and CLI tools, including partial response processing and graceful error recovery.

MCP Tool Development

- ▶ Building custom MCP (Model Context Protocol) tool servers that expose real-time system data, APIs, and operational actions to AI agents — extending LLMs from text generation into infrastructure-aware automation.
- ▶ Defining tool schemas with structured input validation that allow AI agents to query live system state, execute operations, and return structured results.

Self-Hosted AI Models

- ▶ Running open-source LLMs (Llama 3, Mistral, CodeLlama) locally using Ollama — full control of the model stack, no external data exposure, no per-token usage fees.
- ▶ Managing quantization trade-offs (Q4 vs Q8) and hardware resource allocation to run capable models on consumer-grade infrastructure.
- ▶ Deploying local AI endpoints for automated log summarization, internal documentation chatbots, and private code completion.

KEY PROJECTS & TECHNICAL ACCOMPLISHMENTS

Network Violation Tool Management

- ▶ Took over the tool from the previous team and stood it up in the HOC PCP environment with zero disruption.
- ▶ Configured Katana within PCP; established and maintained both Production and Development environments.
- ▶ Configured GitHub Workflows for automated builds and consistent deployments.
- ▶ Authored the Network Violation Homepage and Dev Notes, documenting the full management lifecycle.
- ▶ Conducted security review: secured the API, addressed missing rate limiting, and remediated JS exception messages.
- ▶ Set up the CCID Account required for tool integration and operation.

MWPv2 Platform Access & Management

- ▶ Managed the platform as primary point of contact for health and incident response.
- ▶ Set up Cloudflare rate limiting and created Rate Limiting graphs to prevent abuse.
- ▶ Created Kibana graphs for tracking DDoS events, improving real-time threat visibility.
- ▶ Wrote comprehensive Atlassian documentation for platform remediation best practices.

Toolkit Improvements

- ▶ Added Plesk and cPanel Hypervisor search, broadening diagnostic capabilities.
- ▶ Collaborated with cPanel Dev Team to add VM status visibility — critical for server troubleshooting.
- ▶ Enabled Toolkit access for several teams, expanding cross-org adoption.
- ▶ Created separate Developer access group to scope permissions appropriately.

MySQL Operations & Remediation Scripts

- ▶ Wrote .bash_profile configuration for seamless MySQL server access, standardizing the team's workflow.
- ▶ Configured and documented SOPs for consistent MySQL operations.
- ▶ Identified and updated non-functional cPanel scripts to restore remediation capabilities.
